

Casein Enzymic Hydrolysate (Tryptone)

Intended Use

Tryptone is used in the preparation of variety of culture media such as sterility testing media, diagnostic media and media for biochemical characterization.

Summary and Principle

Tryptone is obtained by enzymatic hydrolysis of Casein. Casein is the main milk protein and a rich source of amino nitrogen. Tryptone is used to support the growth of fastidious microorganisms and also suitable for use in fermentation studies.

Storage and Stability

Store dehydrated medium below 30°C in tightly closed container. Avoid freezing and overheating. Use before expiry date on the label. Once opened keep powdered medium closed to avoid hydration.

Note: TSE/BSE certificate is available on request.

Directions

Refer to the final concentration in the formula of the medium being prepared.
